

Guide for mounting backup battery

1. Start by moving the bed to exit position.

2. Now you need to open the lid on the small control box. Use a screwdriver to push into the hole first on one side, then on the other side. The Lid can now be removed.

3. Hold the backup battery under the large control box. Make sure the cable is pointing towards the small control box, then slide the battery from left to right until it clicks into place.

6. Remove the blind-plugg

7. Insert the cable from the battery backup into the empty hole in the small control box.

8. Close the lid on the control box.

The battery backup is now mounted.
